## I SEMESTER

### IMEC01 STRATEGIC MANAGEMENT

3L+1T

3 Hours, 100 Marks

Strategic management' could be a useful subjects of 1st semester of M-Tech courses. Strategic management' as detailed below prepares a young budding technocrat to manage assets in more efficient way and lead his/her team more effectively.

This subject would cover the following issues:-

- a) **Managing Change:-** Effective change management is the need of the hour. Situations change rather fast these days and has to prepare or mold his / her organization to face such changes and come out winningly.
- b) **Crisis Management:-** Every organization or every individual do face crisis many times. A good management or a good leader keeps himself / herself always prepare for such eventualities. Training in this area has often been neglected.
- c) **Innovation and Creativity :-** Human brain is very creative. Creative thinking is a must for the fast changing world. Creative things results in innovation and new finds. Creativity could be developed in a positive sense by training.
- d) **Entrepreneurship :-** Young budding technocrats need encouragement for creating small/medium size organizations. Sessions on this subject from industry leaders will help in it.
- e) **Work Study and Re-engineering:-** Re-engineering is term used these days in place of old terms 'Work Study' Re-engineering is needed not only for the product but also fro the processes as well as for the 'Organization'.
- f) **Managing Intangibles :-** An organization have (i) Tangibles assets like machines, material etc. and also(ii) Intangibles assets like staff, line managers etc. Managing 'people' or rather 'Leading' people needs to be taught to young engineers.
- g) **Communication Skills :-** We expect our managers to lead their terms. For this communication skills is a must. This could be covered in class room sessions along with practice sessions in groups under the supervision of a teacher.
- h) **Quality and Customers Care :-** ISO -9000 has become a hallmark for quality. This can cover pre-requisites for an organization and how to go about for getting ISO-9000 certification.
- i) **Safety and Ergonomics:-** Safety is often talked about but not cared for to that extant ergonomics is even less known. Technocrats need to know more about

**Note:-** This list is not exhaustive and could be enlarged in due course.

## M.Tech. Programme (Digital Communications)

### TEACHING/EXAMINATION SCHEME & SYLLABUS

---

#### 1MEC02 DIGITAL AND DATA COMMUNICATION

3L+1T

3 Hours, 100 Marks

Characterization of communication signals, signal space representation, equalisation, matched filtering, binary PSK, QPSK, FSK, QAM & M-Ary modulation techniques and their representation. Coherent & non-coherent detection, carrier & symbol synchronization, bits vs symbol error probability, bandwidth efficiency.

Spread spectrum modulation: Pseudo noise sequences, DS & FH spread spectrum.

#### Books :

1. R.D.Gitlin and others, "Data Communication Principles", McGraw Hill.
2. R.L.Peterson and others, "Introduction to Spread Spectrum Communication", Prentice Hall International Edition 1995.
3. Digital Communication ( 2nd Edition). McGraw Hill. Marvin K.Simon & others, "Digital Communication Techniques: Signal Design & Detection", Prentice Hall International 1995.

#### 1MEC03 ANTENNA & RADAR ENGINEERING

3L+1T

3 Hours, 100 Marks

**Antenna:** Fundamental parameters of antennas, radiation integrals, potential functions, linear wire antennas, loop antennas. Arrays: linear, planar & circular. Matching techniques. Broad band antennas, Planar antennas, Aperture antennas & Horn antennas, Antenna measurement. Preliminary on antenna synthesis.

**Radar Fundamentals, Radar System:** Functions and Parameters, Radar Equation, Target and interfacing signals. Target Echo and information extraction, different types of radars, radar antennas, receivers and displays.

**Radar signal processing :** Introduction, Signal integration, spectrum analysis, windows and resolutions, MT fundamentals, DC-Staggering and processing, high, resolution radar, Special radar topics

#### Books:

1. Antenna theory, analysis and design by CA balanis.
2. Antennas by JD Kraus.
3. Introduction to radar by MI Skolnik
4. Radar (Principles, Technology and Applications) by Byron Edde
5. Antennas & Radio Propagation by RE Collin
6. Travelling wave antenna by CH Walter
7. Antenna & wave propagation by KD Prasad
8. Microstrip Antennas by PS Hall
9. Radar Hand book by MI Skolnik
10. Hand book of radar measurement by DK Barton and HR Ward
11. Radar system design and analysis by Hovanession.

# Jodhpur National University

## M.Tech. Programme (Digital Communications)

### TEACHING/EXAMINATION SCHEME & SYLLABUS

---

#### IMEC04.1 COMPUTER NETWORK – I

3L+1T

Hours, 100 Marks

**Introduction:** Basic elements of a computer network. Computing Models. Network topologies and their features. Characteristics of Peer-to-peer, Server-based, Broadcast, and Point-to-point networks. Characteristic features of LAN, MAN, and WAN.

**Network Architecture:** Layered network architecture. The OSI reference model. Concepts of layer entities, layer interfaces, service access points, connection oriented/connectionless services, reliable/unreliable services, and service primitives. TCP/IP reference model. ATM reference model.

**Physical Layer:** Overview of data, signals and channel characteristics. Characteristics and application of various transmission media: Coaxial cable, Twisted pair, Optical fiber and wireless.

**Data Link Layer:** Design issues for data link layer. Framing, character and bit stuffing. Polynomial code (CRC) for error Detection. Flow-control protocols: Stop-and-wait and Sliding-window. Link protocols: HDLC and SLIP and PPP protocols.

**Local Area Networks:** Medium Access Control protocols: ALOHA, CSMA. .  
Features of IEEE LAN standards: 802.2 (Logical Link Control), 802.3 (CSMA/CO), 802.5 (Token Ring), FDDI. 802.12 (100VG-ANYLAN), 802.11(Wireless LAN), ATM LAN, and Fiber channel. Structure and operation of Hubs, Bridges, Switches, Routers and Gateways.

**Operating System:** Functions and types of operating systems. Services provided. Structure of an OS. Concepts of Scheduling, and Memory management. Features of network and distributed operating systems. Remote login, Remote file transfer, Data migration, Computation migration, Process migration, Remote services.

#### Books:

1. Tanenbaum, A.S. Computer Networks, 3<sup>rd</sup> Ed, PHI
2. Stallings, William Data and Compter Communications, 5<sup>th</sup> ED, PHI
3. Forouzan Data Communication and Networks, 2<sup>nd</sup> Ed, Tata Mcgraws Hill
4. Sheldon, Tom Encyclopedia of Networking, TMH
5. Silberschatz and Galvin Operating System Concepts, 5<sup>th</sup> Ed, Addison-Wesley

# Jodhpur National University

## M.Tech. Programme (Digital Communications)

### TEACHING/EXAMINATION SCHEME & SYLLABUS

---

#### **1MEC04.2 DIGITAL SYSTEM DESIGN**

3L+1T

3 Hours, 100 Marks

**INTRODUCTION:** Fundamental & history of various hardware description language, Design flow of ASICs and standard logic circuits using software

**COMBINATIONAL CIRCUIT BUILDING BLOCKS:** Multiplexer, Decoders, encoders, Code Converters, VHDL Code for Combinational Circuits.

**SEQUENTIAL CIRCUITS:** VHDL code for Flip-Flops, shift registers, counters.

**SYNCHRONOUS/ ASYNCHRONOUS SEQUENTIAL CIRCUITS :**Mealy & Moore type FSMs, VHDL Code for Mealy & Moore Machines, VHDL Codes for Serial Adder, Vending Machine.

**DIGITAL SYSTEM DESIGN:** Building Block circuits, Memory organization, SRAM, Design examples of divider, Multiplier, Shifting & Sorting Operations, Clock Synchronization, CPU organization and design concepts.

#### **Books:**

1. *Brown, Vranesic*, Digital Logic Design with VHDL Programming, TMH
2. *J.Bhaskar*, A VHDL Primer, PHI
3. *Doglous Pery*, VHDL Programming by example, TMH

# Jodhpur National University

## M.Tech. Programme (Digital Communications)

### TEACHING/EXAMINATION SCHEME & SYLLABUS

---

#### IMEC04.3 SATELLITE COMMUNICATION

3L+1T

3 Hours, 100 Marks

**Introduction:** Origin of satellite communication current state of satellite communication orbital aspects of satellite communication system performance.

**Earth Station Technology:** Earth station design using antenna, tracking, small earth station antenna equipment for earth station, video receive only station and frequency coordination.

**Satellite Link Design Basic Transmission Theory:** System noise temp and G/T ratio, design of down links, domestic satellite system using small earth station, uplink design, design of satellite link for specified (C/N)

**Multiple Access Techniques: FDMA, Time Division Multiple Access (TDMA) :** Frame structure burst structure frame efficiency, super frame, frame acquisition, and synchronization, burst time plan.

**Demand Assignment Multiple Access Techniques:** Erlang call congestion formula, demand assignment control, DA-FDMA (spade) system, demand assignment TDMA, random access techniques, and miscellaneous access techniques frequency hopping satellite switched TDMA.

**Role and Application of Satellite :** Satellite application different areas, satellite television, telephone service via satellite, data communication, services, satellite for earth observation, satellite for weather forecast, satellite for scientific studies, satellite for military application.

**Propagation on Satellite:** Earth Path and its influence on the Design and Advanced Topics, Quantizing attenuation depolarization, interference effect, rain and ice effect, monitoring propagation effects. VSAT technology and mobile satellite Networks

#### Books:

1. Satellite Comm. By Timothy Pratt (1986), pratt publishers
2. Satellite Comm. By Dr. DC Aggarwal (Khanna Publishers)

## II SEMESTER

### 2MEC01 MOBILE COMMUNICATION

3L+1T

3 Hours, 100 Marks

An overview of wireless communication systems. First generation analog cellular systems, second generation digital cellular systems, third generation systems standards for wireless communications systems. GSM, IMT-2000, UMTS. Mobile Satellite Communication – GEO, LEO, MEO, Terrestrial mobile system.

Cellular communication fundamentals. Cellular systems. Geometry of a Hexagonal Cell. Cochannel interference ratio. Cellular system design in worst case with an omnidirectional antenna, cochannel interference reduction with use of directional antenna. Cell splitting. Frequency and spectrum management and handoffs Access Techniques.

GSM architecture and interfaces. GSM frequency bands, GSM PLMN, GSM PLMN Services, GSM interfaces. The Radio interface MS to BTS. Abis interface (BTS to MSC). Interface BSC to MSC.

Radio Propagation and cellular engineering concept. Propagation characteristics. Multipath faded radio signals. Radio link design. Receiver sensitivity and link budget. Data services in GSM. GSM GPRS. Privacy and security in GSM

Basics of CDMA. Properties and generation of PN sequences. Applications of CDMA to cellular communication systems. Second and third generation CDMA systems/ standards. Multicarrier CDMA. Synchronization and demodulation. Diversity techniques and rake receiver. General study of 4-G mobile communication system.

#### Books :

1. G. Stuber *Principles of Mobile Communication Systems*, Kluwer Academic Publishers, 1996.
2. K. Pahlavan and A. Levesque, *Wireless Information Networks*, John Wiley & Sons, Inc, 1995.
3. Principles & applications of GSM – Vijay K. Garg, and J.E. Wilkes 1999 – Prentice hall PTR.
4. Principal of Mobile Communications by Rappapart

## M.Tech. Programme (Digital Communications)

### TEACHING/EXAMINATION SCHEME & SYLLABUS

---

#### 2MEC02 ADVANCED OPTICAL COMMUNICATION

3L+1T

3 Hours, 100 Marks

**Optical fibers:** Review of fundamentals, signal distortion and attenuation, intermodal and intramodal dispersion, dispersion flattened and dispersion compensated fibers, profile dispersion, study of PMD.

Laser diode and photodiode. Photodetector, noise analysis, Analog and Digital communication link design. WDM, DWDM,

**Optical Amplification and integrated optics:** Optical amplifiers, semiconductor laser amplifiers, theory, performance characteristics, fiber amplifiers, rare earth doped fiber amplifiers, raman and brillouin fiber amplifier, integrated optics, planar waveguides, some integrated optical devices, beam splitters, directional couplers and switches, modulators, periodic structures for filters and injection lasers, polarization transformers and frequency translators.

**Optical couplers:** Overview of WDM, passive optical couplers, Mach-Zehnder interferometer multiplexer, optical add/drop multiplexers, isolators, circulators, optical filters, tunable sources and tunable filters, arrayed waveguide grating, diffraction grating, optical amplifiers, optical integrated circuits. Characterization of optical fibers.

**Optical networks:** Network concepts, network topologies, SONET & SDH, high-speed lightwave links, optical add/drop multiplexing, optical switching, WDM network, examples, mitigation of transmission impairments

**Performance measurement and monitoring:** Measurement standards, basic test equipment, optical power measurements, optical fiber characterization, optical time-domain reflectometer **OTDR**, Optical switching, WDM networks, optical performance monitoring.

**Classification of optical sensors:** Intensity modulated, phase modulated and spectrally modulated sensors.

#### Books:

1. Optical Fiber communication by Senior JM
2. Optical Fiber communication by Gerd Keiser
3. Introduction to Optical Fiber by Allien H. Chairin
4. Optical communication by RM Gagliardi & S. Karp
5. Physics of Semi-conductor Devices by SM Sze.

## M.Tech. Programme (Digital Communications)

### TEACHING/EXAMINATION SCHEME & SYLLABUS

---

#### **2MEC03 IMAGE PROCESSING AND PATTERN RECOGNITION**

3L+1T

3 Hours, 100 Marks

**INTRODUCTION:** Imaging in ultraviolet and visible band. Fundamental steps in image processing. Components in image processing. Image perception in eye, light and electromagnetic spectrum, Image sensing and acquisition using sensor array.

**DIGITAL IMAGE FUNDAMENTALS:** Image sampling and quantization, Representing digital images, Basic Relationship Between Pixels, Zooming and Shrinking digital images,

**INTENSITY TRANSFORMATION :** Basic Intensity transformation functions, Histogram processing, Fundamental of Spatial Filtering. Smoothing, Sharpening Spatial filters.

**IMAGE RESTORATION:** Image restoration model, Noise Models, Spatial and frequency properties of noise, noise probability density functions, Restoration in presence of noise - only spatial filter, Mean filter, order Statistic filter and Adaptive filter, Frequency domain filters - Band reject filter, Band pass filter and Notch filter.

**IMAGE COMPRESSION:** Compression Fundamentals - Coding Redundancy, Interpixel redundancy, Psycho visual redundancy and Fidelity criteria. Image Compression models, Source encoder and decoder, Channel encoder and decoder, Lossy compression and compression standards.

**IMAGE SEGMENTATION:** Fundamentals, point , edge and line detection., THresholding, Region based segmentation., Region based segmentation, Region Growing & Splitting & merging.

**EXPERT SYSTEM AND PATTERN RECOGNITION:** Use of computers in problem solving, information representation, searching, theorem proving, and pattern matching with substitution. Methods for knowledge representation, searching, spatial, temporal and common sense reasoning, and logic and probabilistic inference. Applications in expert systems and robotics.

#### **Books:**

1. Digital Image Processing : Gonzalez & Wood, Addison-Wisley Publisher Comp. 1993.
2. Digital Image Processing : A.K Jain, PHI, Edition 1995.

# Jodhpur National University

## M.Tech. Programme (Digital Communications)

### TEACHING/EXAMINATION SCHEME & SYLLABUS

---

#### 2MEC04.1 COMPUTER NETWORKS II

3L+1T

3 Hours, 100 Marks

**Network Layer:** Design issues for the network layer. Packet switching. Data-gram and Virtual-circuit networks. Routing algorithm properties and types. Dijkstra's shortest path routing, Flooding. Distance-vector routing. Link-state routing. Hierarchical routing. Broadcast routing and Multicast routing. Principles of Congestion control.

**Internetworking:** Principles of internetworking. Tunneling. Fragmentation. Naming and addressing concepts. Hierarchical naming. Domain name system. Name resolution process. IP address classes and concept of subnetting. Classless Inter-domain routing (CIDR) and DHCP concepts. The internet protocols: IP, ICMP, ARP, RARP, RIP, OSPF, EGP and BGP.

**End-to-end Data Transfer:** The design issues for the transport layer. Transport layer protocol issues: addressing, establishing connection, flow control and multiplexing. The internet protocols: TCP and UDP.

**TCP/IP Application:** Overview of TELNET, SMTP, POP, FTP and HTTP.

**Computer Networks:** Features and working of X.25, frame-relay, and ATM networks

**Data Translation and Security:** Principles of data encryption. Overview of secret-key and public-key algorithms. Need for data compression. Overview of data compression techniques. JPEG and MPEG standard overview.

**Network Security and Management:** Network security consideration. Overview of Authentication protocols and Digital signatures. Network management concepts. SNMP protocol. Planning a computer network.

#### Books:

1. Tanenbaum, A.S. Computer Networks, 3<sup>rd</sup> Ed. PHI
2. Stallings, William Data and computer communications, 5<sup>th</sup> ED, PHI
3. Forouzan Data communications and networks, 2<sup>nd</sup> Ed, Tata McGraw Hill
4. Sheldon, Tom Encyclopedia of Networking, TMH
5. Stevens, R.W. TCP/IP Illustrated, Vol. 1: The Protocols, Addison-Vesley.

### TEACHING/EXAMINATION SCHEME & SYLLABUS

---

#### **2MEC04.2 EMBEDED SYSTEMS**

3L +1T

3 Hours, 100 Marks

**THE 8051 MICROCONTROLLER:** Introduction, The 8051 microcontroller hardware, I/O pins, Port, External memory, Counters and Timers, Serial data. Interrupts.

**8051 ASSEMBLY LANGUAGE PROGRAMMING:** Addressing modes, External data moves, push and pop opcodes, Logical operations, Byte level and bit level logical operations. Arithmetic operations, Jump and call instructions, Interrupts & returns.

**REAL TIME CONTROL:** Interrupts, Multiple sources of interrupts, Non maskable sources of interrupts, Interrupt structure in 8051, Timers, Free running counter & Real Time control .

**SYSTEM DESIGN:** Serial I/O interface, Parallel I/O ports interface, Digital and Analog interfacing methods, LED array, keyboard, Printer, Flash memory interfacing.

**INTRODUCTION TO EMBEDED SYSTEM:** Application of Microcontrollers in interfacing,

Robotics, MCU based measuring instruments. Real Time Operating System for System Design,

Multitasking System, Task Definition in a Multitasking System, Round Robin Scheduling, Full Pre-emptive Scheduling, Basic study and Features of Commercial RTOS : WINCE and Embedded Linux.

#### **2MEC04. 3 MODERN TELEPHONE SWITCHING SYSTEMS**

3L+1T

3 Hours, 100 Marks

Electronic space Division switching :- Stored program control (SPC), switching matrices, multistage switching, enhance services photonic switching.

Time Division switching: - Time division space, and time switching, multiplexed switching, combination switching, T-S, T-S-T, switching n-stage combination switching, PBX switching, PBX networking, digital PBX.

Traffic Engg. : - Traffic load , Grade of service, Erlang's formulas, blocking modeling switching systems, Blocking model.

Subscriber Loop, Dialing Systems :- Switching hierarchy & routing, Transmission plan, numbering plan, charging plan, signaling technique.

Local Access Techniques :- Digital subscriber lines, DSL, ADSL etc, WLL, FIL, wireless for local telephone services.

Integrated services digital network: the concept of ISDN, ISDN interfaces and End-user applications, ISDN architecture.

Books :

1. Telecomm. Switching systems & networks- Thaigrajan PHI
2. Comm. System – Taub & Schilling, Mc Graw Hill
3. Telecomm. & the Computers - James Martin – PHI
4. The Issential Guide to Telecomm – Pearson Educah- Annabelz Dodd.

## M.Tech. Programme (Digital Communications)

### TEACHING/EXAMINATION SCHEME & SYLLABUS

---

## III SEMESTER

### **3MEC01.1 OPERATING SYSTEMS**

3L+1T

3 Hours, 100 Marks

Introduction to Operating Systems, Operating system services, multiprogramming, time-sharing system, storage structures, system calls, multiprocessor system. Basic concepts of CPU scheduling, Scheduling criteria, Scheduling algorithms, algorithm evaluation, multiple processor scheduling, real time scheduling I/O devices organization, I/O devices organization, I/O devices organization, I/O buffering.

Process concept, process scheduling, operations on processes, threads, inter-process communication, precedence graphs, critical section problem, semaphores, classical problems of synchronization. Deadlock problem, deadlock characterization, deadlock prevention, deadlock avoidance, deadlock detection, recovery from deadlock, Methods for deadlock handling.

Concepts of memory management, logical and physical address space, swapping, contiguous and non-contiguous allocation, paging, segmentation, and paging combined with segmentation.

Concepts of virtual memory, demand paging, page replacement algorithms, allocation of frames, thrashing, demand segmentation. Security threads protection intruders-Viruses-trusted system.

Disk scheduling, file concepts, file access methods, allocation methods, directory systems, file protection, introduction to distributed systems and parallel processing case study.

### **3MEC01.2 MICRO-ELECTRO-MECHANICAL-SYSTEMS (MEMS)**

3L+1T

3 Hours, 100 Marks

Micro electro mechanical system (MEMS) origins. MEMS impetus/ motivation. Material for MEMS. The toolbox: processes for micro machining. MEMS fabrication technologies. Fundamentals MEMS device physics: Actuation. Fundamental MEMS devices: The cantilever beam.

**Microwave MEMS applications:** MEM switch design considerations. The micro-machined transmission line. MEMS-based microwave circuit and system.

# Jodhpur National University

#### 3MEC02.1 NEURAL NETWORKS AND FUZZY LOGIC

3L+1T

3 Hours, 100 Marks

**Neural Networks Characteristics.** Characteristics of neural networks, Historical development of neural networks principles, Artificial neural networks Terminology, Models of neuron, Topology, Basic learning laws.

**Learning Rules:** The Perceptron, Linear separability, Hebb's rule, delta rule, Widrow & Hoff LMS rule, Correlation learning rule, instar and outstar learning rules. Unsupervised learning, competitive learning, K-means clustering algorithm, Kohonen's feature maps

**Different Neural Network:** Basic Learning law in RBF nets, Back propagation method, feed forward network, ART network.

**Application of Neural Nets:** Pattern recognition, application of BPN, optimization, associative memories, vector quantization, applications in speech & decision making

**Fuzzy Logic:** Basic concept, fuzzy v/s crisp logic set, variables, membership function, operation's inference, techniques, defuzzification, basic inference algorithm. Application of Fuzzy Logic, Fuzzy system design & implementation.

#### Books:

1. Philip D. Wasserman, Neural Computing Theory and Practice. ANZA research, Inc.
2. Mohamad H. Hassun, Fundamentals of Artificial Neural Networks, PHI
3. Zurada - Artificial Neural Networks

#### Reference

1. Fuzzy systems design principles, building Fuzzy IF-THEN rule bases by Riza C. Berkin & Trubatch. JeeBcss
2. Vegna Naryanan – Artificial neural networks
3. Bart Kosko- Neural networks & Fuzzy Logic
4. Simon Kaykin – Neural Network Pearson Lpe
5. Neural Network – Satish Kumar
6. Fundamental of Neural Network – Laurent Forsell

#### **3MEC02.2 BIOMEDICAL ELECTRONICS**

3L+1T

3 Hours, 100 Marks

Brief introduction to human physiology. Biomedical transducers: displacement, velocity, force, acceleration, flow, temperature, potential, dissolved ions and gases. Bioelectrodes and biopotential amplifiers for ECG, EMG, EEG, etc. Measurement of blood temperature, pressure and flow. Impedance plethysmography. Ultrasonic and nuclear imaging.

**Prostheses and aids:** pacemakers, defibrillators, heart-lung machine, artificial kidney, aids for the handicapped. Safety aspects. Telemetry – Transmission of the original through wire & wireless. Imaging techniques – Ultrasound, CAT, X-Rays, PET, NMR, Nuclear. Physiological effect of electric current, safety.

**Cardiological Signal Processing:** Basic Electrocardiography, ECG data acquisition, ECG lead system, ECG parameters & their estimation, the use of multi scale analysis for parameters estimation of ECG waveforms, Arrhythmia analysis, monitoring, long form continuous ECG recording. ECG data reduction technique, Direct data compression techniques, Direct ECG data compression techniques. Transformation compression techniques. Other data compression techniques. Data compression techniques, comparison.
